Note Date	Note Text	Note By	Note Access	Note Type
07-07-2025 3:03 am	Admitted MH - Observation (47667, 5534)	Shrewsberry, LGSW, Eric	Infirmary Admit	Infirmary
07-07-2025 3:37 am	Patient escorted to trauma room due to multiple self-harm lacerations. Patient cut "HELP" on his R forearm. Non-adherent dressing applied with 4x4 gauze. R FA laceration measuring 12.5x 0.2x 0.1 cm. Vaseline gauze and kurlix applied. Laceration on penis measuring 0.5x 3.5x 0.1 cm. 3 steri-strips and 4x4 gauze applied. Hemostasis achieved. Patient educated to alert nursing staff if bleeding would resume or if any needs would arise. Dr. Johnson notified and will be seeing the patient in the morning to determine if sutures are needed. E. Shrewsberry LGSW notified and orders placed.	Nutter, RN, Allyson	Medical Staff	Medical Note
07-07-2025 3:54 pm	Approximate time of initial visit on MHU~1100. When this provider arrived on the MHU patient was standing at his closed cell door yelling at the mental health employee who was there to see him. Individual words could not be distinguished, but patient's face appeared angry and the tone of his yelling was angry. Patient subsequently agreed to speak with this provider as he had verbalized concerns regarding his injuries to mental health. Patient reported to me that "when I piss there is stuff dripping out of where the cut is." He also c/o "burning" when he urinates. When 2 officers were available and patient had been cuffed (in front) and shackled patient was seen and examined inside	Johnson, Sherri	Medical Staff	Medical Note

	of his cell on the mental health unit. He was awake, alert and ambulatory in his room. Conversation with this provider was relevant and respectful. Superficial lacerations to the bilateral forearms, spelling out H-E-L-P on the right FA and linear form on the left. No steri-strips are in place, scabs intact. No bleeding, erythema, edema or drainage. Laceration ~38mm long around girth of penis approximately midshaft. Patient observed urinating with strong stream, clear yellow urine, and no appearance of fluid in laceration. No steristrips present on wound (removed by patient prior to my arrival), but active bleeding is minimal. Patient observed to have ~3 inch circle of blood on front of boxer shorts. Patient was subsequently brought to medical, still in cuffs and shackles, accompanied by 2, then 3 officers for closure of penile laceration secondary to selfharm with a razor. Procedure explained to patient in detail including medical necessity of procedure to avoid further bleeding, allow for improved wound healing and decrease chances of infection. Patient indicated "man, I did not think this through...this is embarrassing," but stated "do whatever you need to do doc." Penis and surrounding area cleaned with betadine and sterile fenestrated drape applied. Laceration irrigated and no foreign body identified. Edges of wound did bleed readily with prepping. Local anesthesia with 1% lidocaine without epinephrine. 7 sutures placed using 4-0 nylon. TAO, telfa and gauze wrap applied loosely. Patient tolerated well. EBL < 2ml. All needles disposed of and tools accounted for at conclusion of procedure. Patient given instructions on wound care and advised to notify medical if bleeding, swelling, increased pain or any color change of penis occurs. Given location of wound, non-clean razor used as object of self-harm and prison environment, will cover with antibiotic and tetanus shot. Patient verbalized understanding.

07-09-2025 4:04 pm	Completed Appointment	Shrewsbury, LGSW, Eric	Completed Appointments	Misc. Note
07-10-2025 10:31 am	Patient has refused all 0500 and 12:00 medications. The patient has refused to get up to take either. He stated "I don't want them" and went back to sleep. It was reported to this writer by the CO on the unit that the patient was awake all night and then went to sleep this morning. Woke up long enough to eat breakfast and then went back to sleep. The patient is currently asleep.	Summers, Nicole	Medical Staff	Medical Note
07-10-2025 3:13 pm	Sick call completed 7-10-25 at 3:13 pm by Catherine Kincaid, MA	Kincaid, MA, Catherine	Completed Appointments	Misc. Note
07-10-2025 3:25 pm	Patient expressed to staff that he thought he was supposed to have a dressing change for the self inflicted laceration on his penis. There were no orders in his chart specifically stating that so I spoke with the Director of Nursing Shirley Hamrick who spoke with Dr.Johnson. Per Dr.Johnson, the patient was instructed at the time of suturing, to leave it open to the air as long as it wasn't bleeding. Patient told to cleanse the area with warm water and soap and to gently pat dry. Patient is receiving antibiotics currently. Patient to have sutures removed in 4 more days unless other wise stated. Patient instructed to notify staff should any bleeding start, infection noted, or swelling.	Summers, Nicole	Medical Staff	Medical Note
07-11-2025 2:16 pm	Patient informed PsiMed staff member Catherine Kincaid that he thought his penis was infected. The patient was in the shower and I was asked to assess him. I was escorted to the shower room with a male Correctional Officer that was on the unit. I asked the patient if he was comfortable with letting me see the area in question. The patient said yes. The patient has 7 sutures to the top, mid shaft of the penis-slight redness and slight swelling noted on the distal side of the sutures. The patient said that he had not been cleaning the area since the sutures were placed. No pain when the area was touched. Explained to him that he needed to gently wash the area with soap and water, rinse well, and gently pat it dry. His left arm was bleeding, and he said that he pulled the scab off of the cut.	Summers, Nicole	Medical Staff	Medical Note

	Told him to gently wash that area as well, and to pat dry. Large band-aids applied to the left arm. Unable to wrap with a gauze type bandage as the patient is on a constant watch for self harm. Told the patient to watch for any signs of infection, such as drainage, foul odor, increased swelling and redness, pain, or feeling sick/fever. Explained that he needed to clean the areas daily and I notified the officer he would need to be given a small amount of soap to use each day. I called and spoke with medical to inform them of the issue and they are in agreement with the above information. I will remind the patient to notify staff with any concerns or the need for medical care. The patient is currently on antibiotic treatment and Motrin.			
07-11-2025 4:02 pm	Sick call completed 7-11-25 at 4:02 pm by Catherine Kincaid, MA	Kincaid, MA, Catherine	Completed Appointments	Misc. Note
07-11-2025 4:14 pm	*Addition to note written 7/11/2025 @ 1416. Bleeding to left forearm had stopped prior to applying bandaids. Bandaids applied as a protective covering to prevent the area from coming into contact with anything until the skin forms a new scab. The area did not need any type of gauze wrap as the area was no longer bleeding. *Correction to my entry of the patient being on a constant watch. The patient is NOT on a constant watch. 14.	Did the victim use protective gear?	<input type="radio"/> <b>N/A</b>	
16.	Critical Incident Debriefing	At approx. 0155 Central Control informed medical staff that they were needed in MHU that I/M Lowe had cut himself. While arriving to MHU I/M Lowe was standing with officers at his cell door. I/M stated that he had cut himself, blood was present. I/M had wrapped plastic wrap around both of his arms, blood present. I/M was brought to medical for an assessment. Nursing staff assessed wounds on his right inner forearm he stated that was "old" it happened yesterday but it was currently bleeding. On his left inner forearm there was lacerations that were approx 6 inches long. On his penis shaft he had a laceration that was approx 1 mm deep 3.5cm x 0.5 cm across. All of the area's were cleaned and bandaged. Steri strips were placed on the penis and wrapped. There was no active bleeding at this time. Psi med and medical providers were notified. verbal orders were given from both Psi med and S.Johnson MD. I/M placed on a level constant watch, strip cell, suicide blanket, finger food, staff contact only, razor restriction. Medical provider will reassess wounds.
